MICROFILM CORP.

Methylene Blue
Analysis

Customer Name: Mina Fox

Address: 100 Carmant Ave. Bensalem, PA 19010

Your sample film strips have been tested for archival quality (residual thiosulfate concentration). They were tested according to the methylene blue method described by the American National Standards Institute.

Concentrations of less than (<) 1.4 µg (micrograms) indicate archival quality, and greater than (>) 1.4 µg indicate non-archival quality. The test is only meaningful and accurate if performed no later than two weeks after processing. It is our understanding that we have received your film within the 2-week time-frame.

Actual test readings are provided below, as well as "pass/fail" check marks.

TEST IDENT.	ACTUAL CONCENTRATION	MEETS ANSI STANDARD (<) 1.4 µg	DOES NOT MEET ANSI STANDARD (>) 1.4 µg
MPP-Int. Bureau 8/20/91	.19	✓	

Archival quality, as measured by residual thiosulfate concentration, is defined in ANSI Standard IT9.1-AS: "A photographic film composed and treated so that under archival storage conditions it is suitable for the preservation of records having permanent value". This same Standard sets the archival limit at 1.4 µg for residual thiosulfate.

A 3x3 grid of numbers from 1 to 9, rotated 45 degrees clockwise. The numbers are arranged in a pattern that suggests a magic square, but the rotation makes them difficult to read. The numbers are: 1, 2, 3, 4, 5, 6, 7, 8, 9.

A 3x3 grid of numbers from 1 to 9, rotated 45 degrees clockwise. The numbers are arranged in a pattern that suggests a magic square, but the rotation makes them difficult to read. The numbers are: 1, 2, 3, 4, 5, 6, 7, 8, 9.

IEL SINCE 1938
MICROFILM CORP.

Methylene Blue
Analysis

Customer Name: Micor Inc

Address: 100 Clement Ave. Bensalem, Pa. 19020

Your sample film strips have been tested for archival quality (residual thiosulfate concentration). They were tested according to the methylene blue method described by the American National Standards Institute.

Concentrations of less than (<) 1.4 µg (micrograms) indicate archival quality, and greater than (>) 1.4 µg indicate non-archival quality. The test is only meaningful and accurate if performed no later than two weeks after processing. It is our understanding that we have received your film within the 2 week time-frame.

Actual test readings are provided below, as well as "pass/fail" check marks.

TEST IDENT.	ACTUAL CONCENTRATION	MEETS ANSI STANDARD (<) 1.4 µg	DOES NOT MEET ANSI STANDARD (>) 1.4 µg
MPP-NEG Pulsar 2/9/91	1.9	✓	

Archival quality, as measured by residual thiosulfate concentration, is defined in ANSI Standard IT9.1-AS: "A photographic film composed and treated so that under archival storage conditions it is suitable for the preservation of records having permanent value". This same Standard sets the archival limit at 1.4 µg for residual thiosulfate.
